## PROJECTS WORKED ON

### Project Title : "Kiona Placement Consultancy"

- **Software Platform :** Windows NT, Java2, JSP, Servlets and SQL Server with Tomcat.
- **My Role** : Developer
- **Project Details :** Kiona Placement Consultancy is essential software to provide jobs for jobseekers. Now a day's most of the jobseekers are placed through consultancies. It is essential for recruiters for getting the right person for the right job. So consultancy service is important for both recruiters and jobseekers. Kiona Placement Consultancy is a tool to create interactive relationship between recruiters and jobseekers. Suppose Placement consultancy runs through manual paper work system then it's very difficult to maintain their business in the modern market. So the software helps to computerize their work more efficiently. In this system the jobseekers can register with their resumes, and recruiter can register with their requirements. With regards to recruiter requirement, consultancy search for the candidates and connecting right jobseeker to the right recruiter.

### Project Title : "Online Shopping Cart"

- **Software Platform :** Windows NT, Java2, JSP, Servlets and SQL Server with Tomcat
- **My Role** : Developer

  **Project Details :** Online Shopping Cart is essential software to provide Online Shopping facility to Customers. Now a days most of the people are busy with their work. It is essential for shopping mall owners to keep the customer to be at his comfort so by helping the person for shopping online one can increase the customer satisfaction buy providing him/her with the utmost facility.

  Online Shopping Cart is a tool to create interactive relationship between Customer and the Owner. In this system the Customer can register with their Details, and can register with their requirements. With regards to Customer requirement, one can provide the needful.

### Project Title : Zomato API
